

UVM path complete

You have walked the UVM twenty seventeen path

What you can do now

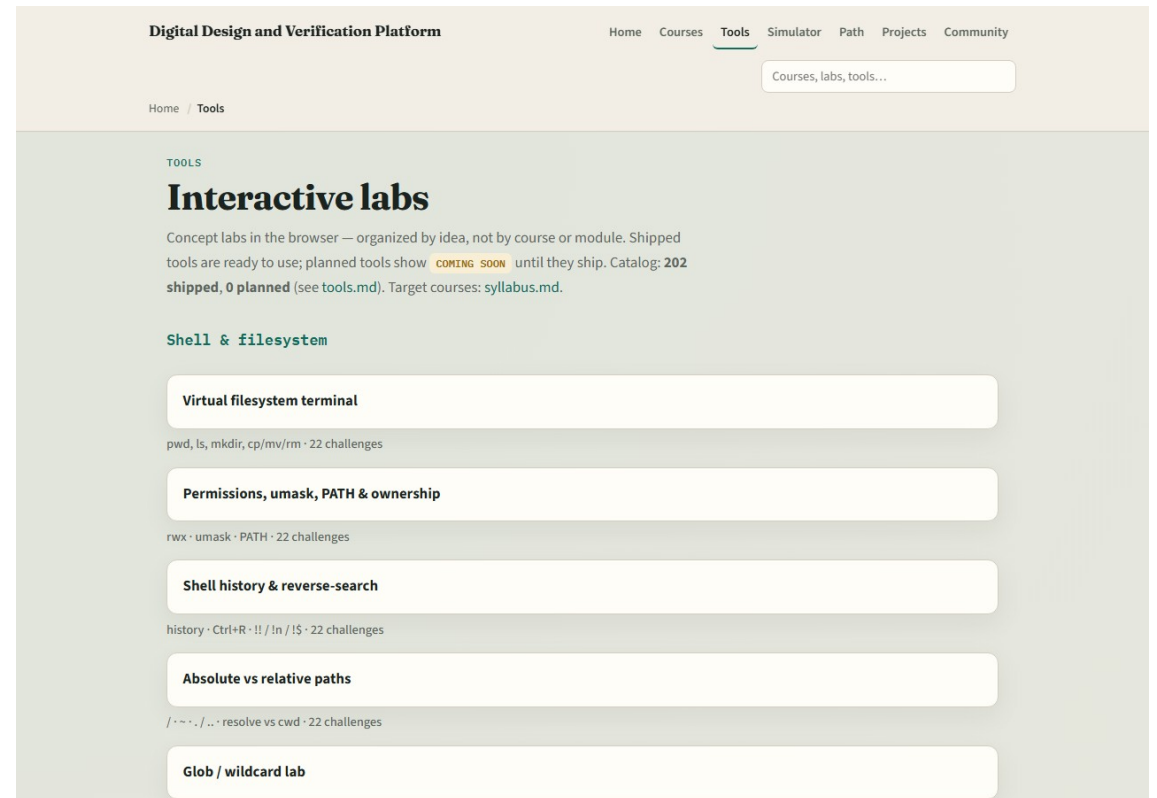

- You can explain layered testbench roles and how UVM maps onto them
- You can navigate phases, factory overrides, ConfigDB, agent anatomy
- VIP handoff pieces
- Run, or rehearse, a small offline UVM test on Verilator
- That is the methodology literacy later VIP and planning courses expect

Close the track gaps

- If you mainly used browser labs
- If you mainly used offline UVM
- Either track works for self-study; both together stick best before you move on
- Browser tools are literacy sketches, not a substitute for Accellera UVM on a simulator

The tools you practiced

- Here is the tools index again, the same shelf of concept labs you opened along the way
- You do not need to re-clear every challenge
- Use it as a map

Next

- Complete the quiz for this part
- Verification planning and management deepen coverage closure, CI

Your turn

- Review the wrap checklist in the module README
- Confirm you can sketch agent, env
- When you are ready
